4.2. Packaging Info

4.2.1. Tray packaging

Anti-static trays are specifically designed for mass production and are fully compatible with standard SMT automated assembly lines. To optimize manufacturing efficiency, standard PET or APET anti-static materials are utilized, both ensuring excellent mechanical stability and ESD protection.

Both tray variants share identical physical dimensions and structural designs, differing only in the text marking printed on the surface for material identification.

8. Reference circuit

Module is pre-programmed with Raytac's testing code. Default is using "DC-DC mode". The Nordic NCS firmware is set to use external 32.768KHz so please add it to make module work.

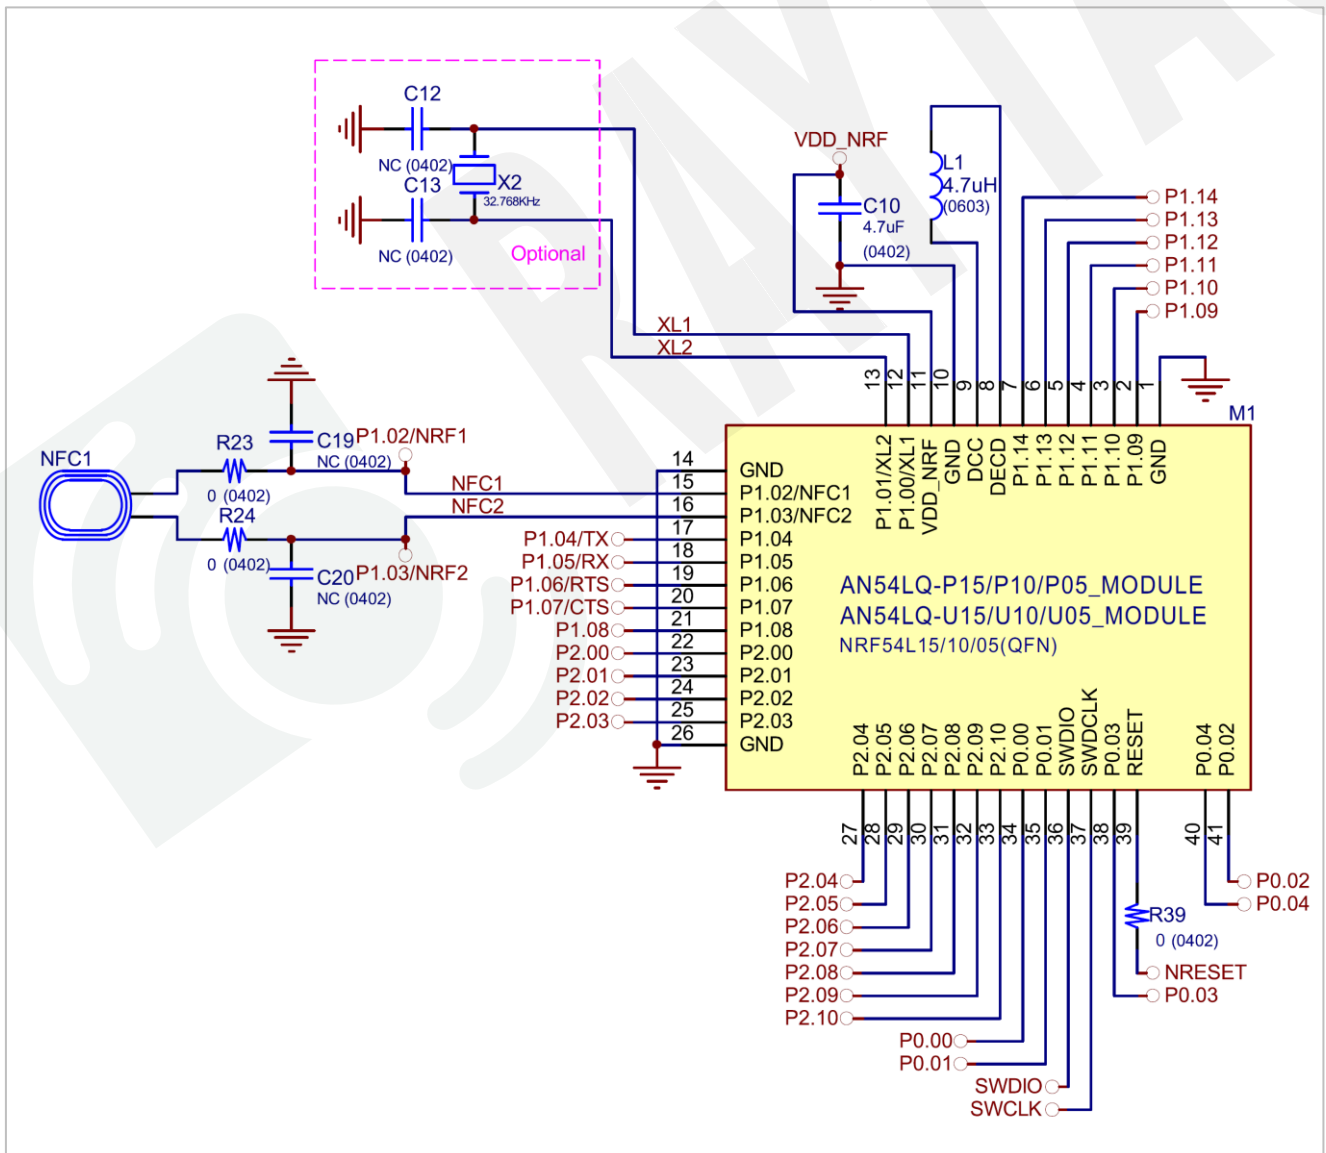

REMARK:

**** DECD decoupling capacitor (2.2μF) is already inside the module. ****

**** When enabling the DC/DC regulator, the device checks if an inductor (L1) is connected to the DCC pin. If L1 is not detected, the device remains in LDO mode.****

**** When **NOT** using NFC, please remove NFC1 / C19 / C20. ****

**** When using internal 32.768KHz RC oscillator, please remove X2 / C12 / C13. ****

The final host product still requires Part 15 Subpart B compliance testing with the modular transmitter installed.

9.13.6. Note EMI Considerations

Note that a host manufacture is recommended to use KDB996369 D04 Module Integration Guide recommending as "best practice" RF design engineering testing and evaluation in case non-linear interactions generate additional non-compliant limits due to module placement to host components or properties.

For standalone mode, reference the guidance in KDB996369 D04 Module Integration Guide and for simultaneous mode; see KDB996369 D02 Module Q&A Question 12, which permits the host manufacturer to confirm compliance.

9.13.7. How to Make Changes

You are cautioned that changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment. Only Grantees are permitted to make permissive changes, if the module will be used differently than granted conditions, please contact us to ensure modifications will not affect compliance.

10. Notes and Cautions

To ensure proper integration and long-term reliability of this RF module, the following regulatory and technical considerations must be observed:

The OEM integrator must not provide instructions to the end user regarding how to install or remove this RF module in the user manual of the final product that integrates this module.

The end user manual shall include all required regulatory information and warnings as shown in the official user manual.

This module is not designed for lifetime use. Like general electronic products, it may degrade after continuous usage over the years. To ensure optimal performance and longevity, please observe the following precautions:

- Follow the guidelines of this document while designing circuit/end-product. Any discrepancy of core Bluetooth technology and technical specification of IC should refer to definition of Bluetooth Organization and Nordic Semiconductor as final reference.
- Do not supply voltage that is not within range of specification.
- Eliminate static electricity at any cost when working with the module as it may cause damage. It is highly recommended adding anti-ESD components to circuit design to prevent damage from real-life ESD events. Anti-ESD methods can be also applied in mechanical design.
- Do not expose modules under direct sunlight for long duration. Modules should be kept away from humid and salty air conditions, and any corrosive gasses or substances. Store it within -40°C to $+125^{\circ}\text{C}$ before and after installation.
- Avoid any physical shock, intense stress to the module or its surface.
- Do not wash the module. No-Clean Paste is used in production. Washing it will oxidize the metal shield and have chemistry reaction with No-Clean Paste. Functions of the module are not guaranteed if it has been washed.

The module is not suitable for life support device or system and not allowed to be used in destructive device or systems in any direct or indirect ways. The customer agrees to indemnify Raytac for any losses when applying modules in applications such as the ones described above.
